

Aerial Markers

- i** *Big—readable from the air at long distances*
- i** *Made of durable aluminum*
- i** *Easily attached to any tower or crossarm*

Aerial markers are crucial elements in the cost control of line maintenance. Missing, faded, or damaged markers result in considerable down-time for field repair personnel. Premax produces transmission line markers that are large, rugged, and identifiable from a considerable distance. You can number a tower once and rest assured you won't have to number it again.

Our markers are easily attached to lattice towers & concrete or steel pylons via available racks, banding & other mounting fixtures. Consult factory for specific application.

Size	Character/Plaque Style	Item	Qty
6 inch	Yellow Nos./Black Block Plaque	614Y-*	50/box
