

AERIAL MARKERS

PREMIUM QUALITY | MAXIMUM DURABILITY | FAST SHIPPING

Aerial markers are crucial elements in the cost control of line maintenance. Missing, faded, or damaged markers result in considerable down-time for field repair personnel. Premax produces transmission line markers that are large, rugged, and identifiable from a considerable distance. You can number a tower once and rest assured you won't have to number it again.

Our markers are easily attached to lattice towers & concrete or steel pylons via available racks, banding & other mounting fixtures. Consult factory for specific application.

SIZE	CHARACTER/PLAQUE STYLE	ITEM	QTY
